Ocean Biology and Biogeochemistry Program

EXPLORE EARTH

Tug of war between winter and spring on the heart-shaped Lake St. Clair along the U.S./Canadian border near Detroit.

Landsat 8 image acquired on March 6, 2021; natural color composite.

GLIMR – Geostationary Littoral Imaging and Monitoring Radiometer

Hyperspectral (350-1040 nm) ocean color sensor in Geostationary orbit (launch ~2026/2027)

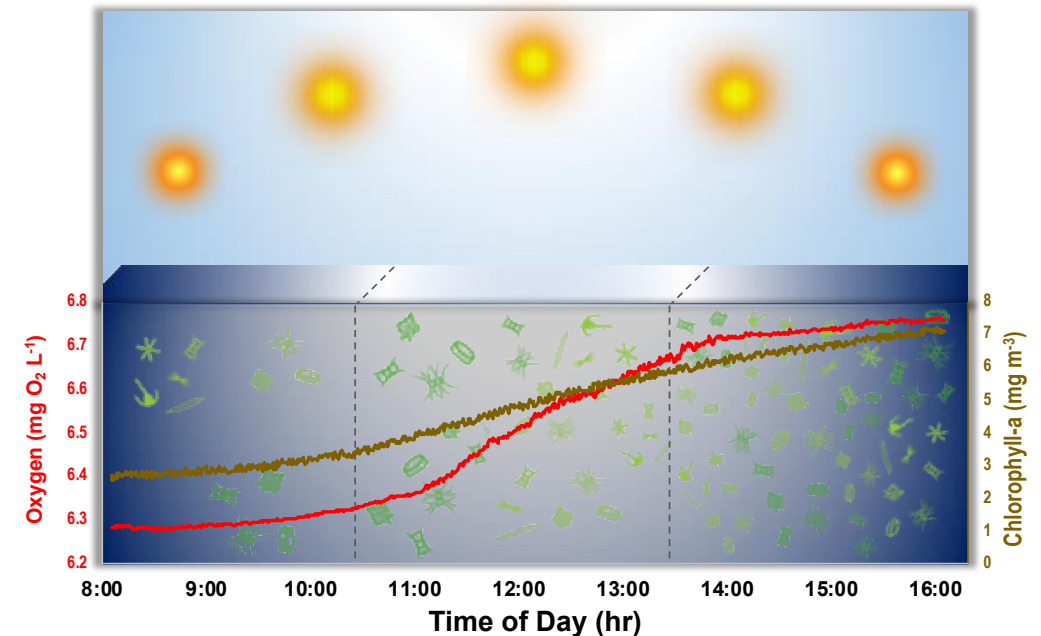

- Targeting Gulf of Mexico and other coastal waters of N. and S. America including Chesapeake Bay
- **Sub-hourly imaging** frequency; spatial res. of 300 m (nadir) or ~400 m over Chesapeake Bay

Short Term Coastal Processes: How high frequency fluxes of sediments, organic matter, and other materials between and within coastal ecosystems regulate the productivity and health of coastal ecosystems.

Phytoplankton Growth and Physiology Understanding processes contributing to rapid changes in phytoplankton growth rate and community composition.

APPLICATIONS: Formation, magnitude, and trajectory of harmful algal blooms (HABs) and oil spills

EARTH SYSTEM SYNERGY ACROSS MISSIONS FOR RESEARCH AND APPLICATIONS

Aerosols — A-CCP
 Gases — SBG
 Surface Deformation — NISAR
 Surface Composition and Geologic Hazards — SBG

Precipitation — A-CCP
 Ice Mass Evolution — NISAR
 Snow Albedo and Melt — SBG
 Water storage-MC

Boundary Layers — A-CCP
 Ecosystem Structure — NISAR
 Vegetation Type and Physiology — SBG

Phytoplankton, Organic Matter, Sediment — SBG, GLIMR, PACE

Carbon Cycle & Ecosystems Focus Area: Integrating from surface *in situ* to satellite

Carbon-related research

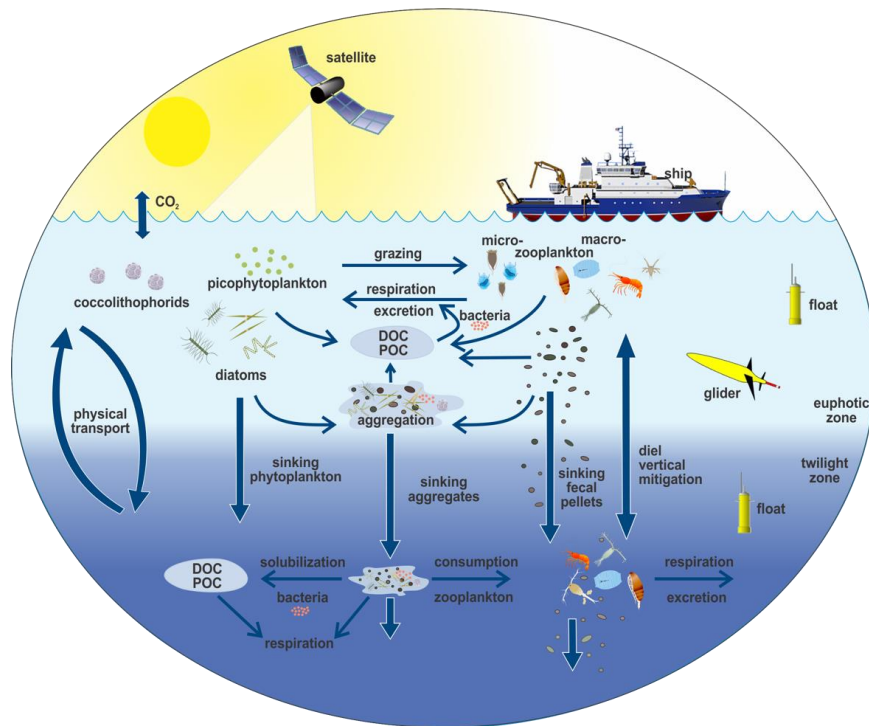

Research funded mainly through

- Core OBB
- Core PO
- RRNES
- IDS
- CCS
- T/A/SNPP
- Student/young investigator programs

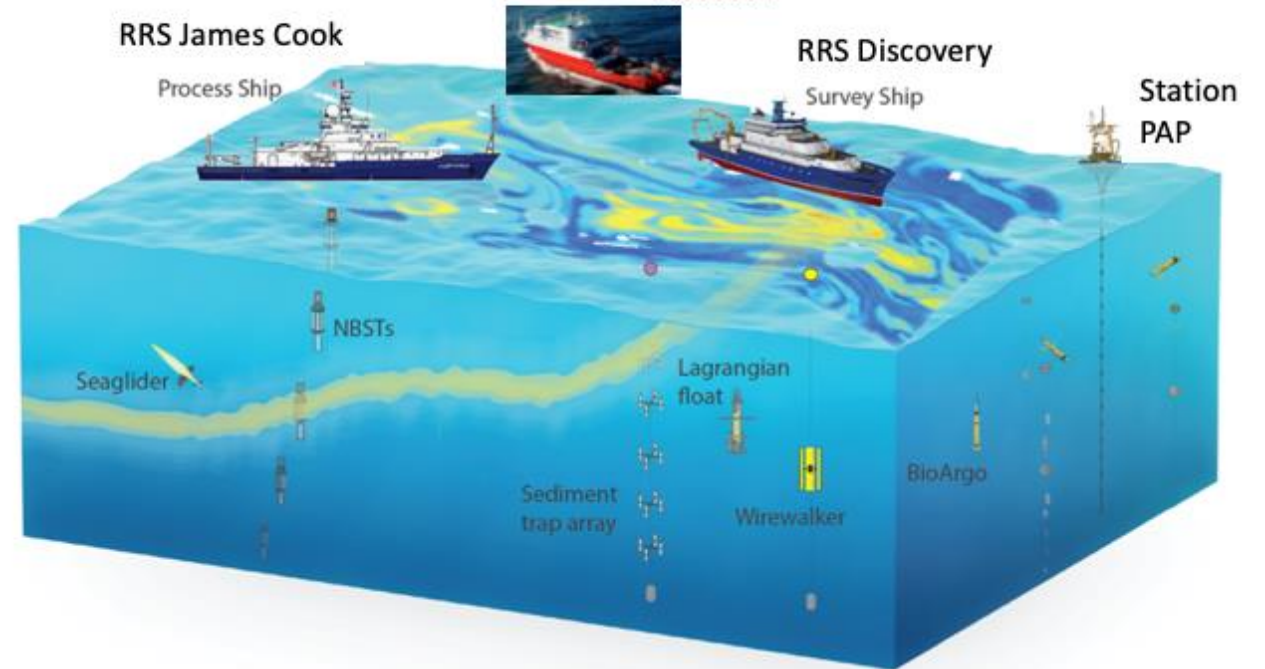

EXport Processes in the Ocean from Remote Sensing (EXPORTS)

Through North Atlantic (2021) and North Pacific (2018) campaigns, EXPORTS sought to better understand the fate of carbon in the ocean, combining satellite and ship-based observations with in-water autonomous glider and profiling floats.

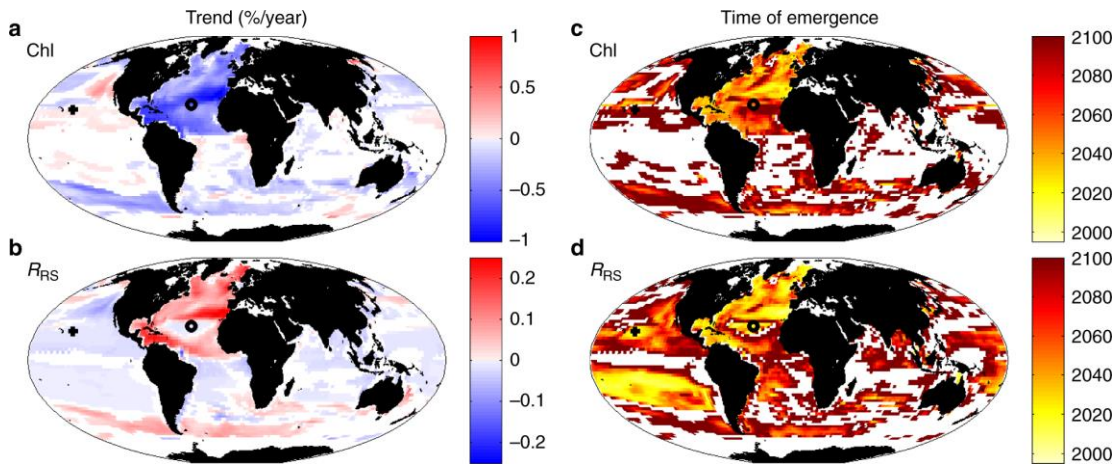

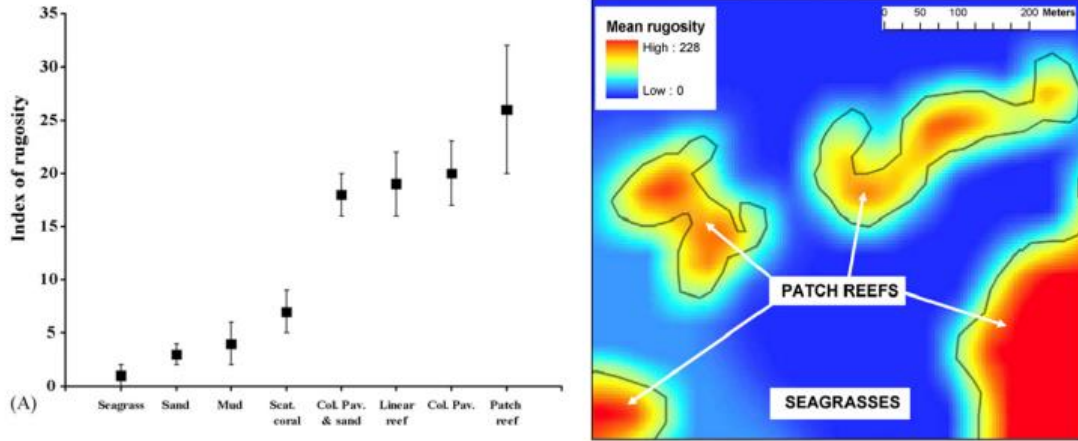

North Atlantic 2021

In situ assets – GO-BGC and SOCCOM

- 1) Bio-Argo is opening the possibilities for resolving the 4D ocean phytoplankton & carbon dynamics
- 2) The combined satellite – Argo array may allow us to address long standing problems
- 3) 157 NASA-optical augmented SOCCOM floats have been deployed to date

○ SOCCOM Floats - OPS
● SOCCOM Floats - DEAD
● UW/MBARI Floats
12-Feb-2022
